# Amod Dhopavkar

+1 (617) 309-0892 | amoddhopavkar2@gmail.com | linkedin.com/in/amoddho2 | amoddhopavkar.com

## Education

**Northeastern University**
*Master of Science in Computer Science*

**University of Pune**
*Bachelor of Science in Computer Science*

## Experience

**Software Engineer** Dec 2024 – Present
*Goldman Sachs* *Salt Lake City, UT*

- Containerized 50+ Java micro-services with Docker and Kubernetes, cutting deployment time from 60 min to 15 min and maintaining 99.99% availability.
- Replaced implicit service-to-service trust with WebID mutual-TLS authentication, eliminating login-related outages for 50k+ users.
- Deployed an XGBoost-based pre-clearance service on AWS EKS that evaluates 50k+ trades per hour, shrinking approval latency from 30 min to 3 min and reducing compliance violations by 85%.
- Built a Kafka/Spring Boot event bus that streams trade activity to auditors in real time, shortening audit cycles from weeks to hours.

**Software Engineer Intern** May 2024 – Sep 2024
*DataRobot* *Boston, MA*

- Delivered a Streamlit front-end backed by TensorFlow-Serving that 1k+ analysts use weekly; reduced p99 inference latency by 50% through request batching and GPU sharing.
- Published a TypeScript component library with Storybook documentation; adopted by five product teams and reduced UI development effort by ∼60%.
- Enabled server-side rendering and route-level code-splitting on the flagship React application, raising the Lighthouse performance score from 62 to 90.

**Software Engineer** May 2023 – Dec 2023
*Addgene* *Boston, MA*

- Integrated WebSocket-based order tracking that updates customers in real time, cutting "where is my shipment?" support tickets by 50%.
- Introduced Redis caching and optimized two Postgres queries, dropping p99 API latency from 300 ms to 50 ms while handling 5× traffic growth.
- Implemented an OAuth2 gateway with JWT validation that blocked 99.9% of unauthorized access attempts on a 200k sample repository.

**Software Engineer** May 2021 – Aug 2022
*Quantiphi* *Mumbai, India*

- Migrated a 100 TB/day log-analytics pipeline from Elasticsearch to BigQuery with Apache Spark, reducing infrastructure cost by 40% and accelerating query performance 15×.
- Built Airflow- and DBT-managed pipelines with built-in data-quality checks, raising observed reliability from 85% to 99%.
- Developed a Spark-Streaming fraud-detection job processing 1M+ events per second, cutting the false-positive rate from 3% to 0.8% and saving an estimated $2 M annually.

## Projects

**ClauseGuard – Chrome Extension** chromewebstore.com/clauseguard

- Developed ClauseGuard, a privacy-first Chrome extension that locally scans Terms-of-Service pages and highlights 40+ risky legal clauses (e.g., forced arbitration, data-sale permissions) with severity-weighted scoring.
- Processes all text offline—zero network calls, zero telemetry—protecting 100% of user data while giving instant, color-coded risk summaries across seven legal categories.

## Technical Skills

**Languages & Frameworks**: Python, Java, JavaScript, TypeScript, C/C++, SQL, React, Node, Spring Boot, Flask
**Cloud, DevOps & Data**: AWS, GCP, Docker, Kubernetes, Terraform, Ansible, CI/CD, Airflow, Kafka, MongoDB, Elasticsearch, BigQuery, Redis
**Tools & Concepts**: RESTful APIs, Microservices, Distributed Systems, Grafana, Prometheus, Git
